Project Description

This scope of services describes engineering services to be provided by ARCADIS to the City of Atlanta Department of Public Works (DPW) for the development of work orders to upgrade intersection controllers and cabinets to 2070 ATC standard. The DPW has requested ARCADIS' assistance in providing a database conversion and field inventory for various locations within the city limits. ARCADIS will develop this inventory information for the City of Atlanta to submit to the Georgia Department of Transportation (GDOT) for the purpose of developing task orders for its on-call contractor to perform necessary upgrades.

This scope of services defines ARCADIS responsibilities and describes the database conversion and field inventory deliverables for the City of Atlanta.

Database Conversion

ARCADIS will convert the existing traffic signal controller database to the ACTRA-based format for implementation in the 2070 ATC controller. ARCADIS will coordinate with City staff to obtain the original databases. Existing signal timing parameters, coordinated timing, and settings will be reviewed and modified as needed for coding in the ACTRA database and 2070 controllers. ARCADIS will submit the final databases to the City Traffic Engineering for their review and approval prior to implementation into the controllers. ARCADIS will install and shop-test the new timings at the contractor's facility. The testing will include clearing all controller alarms and logs and running each time-of-day plan.

Field Inventory

ARCADIS will provide signalized intersection inventories to be used in upgrading the cabinet and controller at various locations in metro Atlanta. The intersection list has been developed by the City of Atlanta with priorities approved by GDOT. These inventories will follow the GDOT procedure used in developing work orders for its contractor. ARCADIS will perform a field inventory of traffic signal locations and document field conditions, identify all work to be done by the GDOT contractor, and identify any other deficiencies that might need to be addressed by others (marked-up field sketches, inventory checklist, etc.). These tasks will be done using established
